

## Final Assignment

Create a restaurant website which has 2 pages, a home page and a page for food items , drinks , it has to be implemented using html css and js

### **Final Assignment – Restaurant Website**

#### **Project Title:**

#### **Build a 2-Page Restaurant Website**

#### **Objective:**

Create a simple restaurant website using **HTML, CSS, and JavaScript**. The website must contain:

- 1. Home Page**
- 2. Menu Page** (Food items and Drinks)

The project should demonstrate your understanding of:

- HTML structure
- CSS styling and layout
- Basic JavaScript interactivity
- Navigation between pages

### **Project Requirements**

#### **Home Page (index.html)**

The home page should contain:

- Restaurant name and logo
- Navigation bar (Home | Menu)
- Hero section (large banner with welcome message)
- About section (short description of the restaurant)
- Contact section (address, phone, email)
- Footer (copyright)

#### **Menu Page (menu.html)**

This page should contain:

- Navigation bar (same as Home)
- Section for **Food Items**
- Section for **Drinks**
- Each item must include:
  - Item name
  - Short description
  - Price
- Use cards or grid layout for items

## CSS Requirements

- Use an external stylesheet (style.css)
- Style:
  - Navigation bar
  - Buttons
  - Cards
  - Layout using Flexbox or Grid
- Use consistent colors and fonts
- Make it responsive (basic mobile-friendly layout)

## 4 JavaScript Requirements

Create a script.js file and implement at least ONE of the following:

- Toggle mobile menu
- Filter menu items (Food / Drinks)
- Display alert when clicking “Order Now”
- Add simple dark/light mode toggle
- Show/hide sections dynamically

## **Recommended Project Structure**

restaurant-website/
